

How to Assemble the 600ml Silicone Sausage Foil Pack Gun

This is how the Silicone Sausage gun comes out of the packaging. Note that the flange is not installed. This guide will show you how to install the flange correctly.

1) Disassemble the silicone sausage foil gun.

2) The metal flange is held in place by the screws. Unscrew the first one and place it inside the white flange. You can now screw the flange back onto the threaded rod. The second screw at the back is to position the flange and to tighten it onto the rod.

The picture on the left shows the correct way to position the flange, the picture on the right is the incorrect position this may cause a puncture in the foil.
